Print-Friendly Design:

Standard FDM printers - no MMU required

- Panel is split into **two parts** to fit printers like Prusa MK3/MK4 or Bambu Lab
- Parts are designed for **easy alignment and assembly** using printed alignment pins

MMU - compatible XL one piece - compatible Recommended: 0.25 mm nozzle for clean text

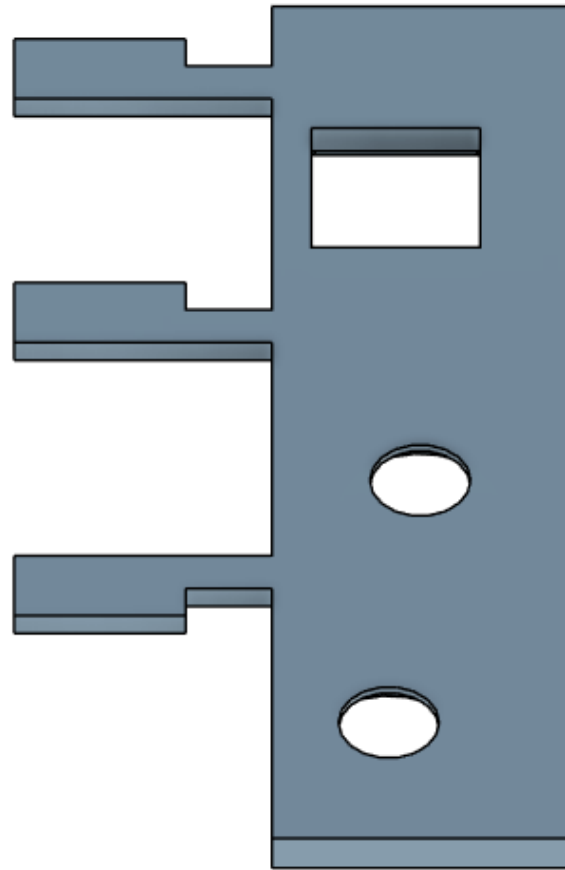

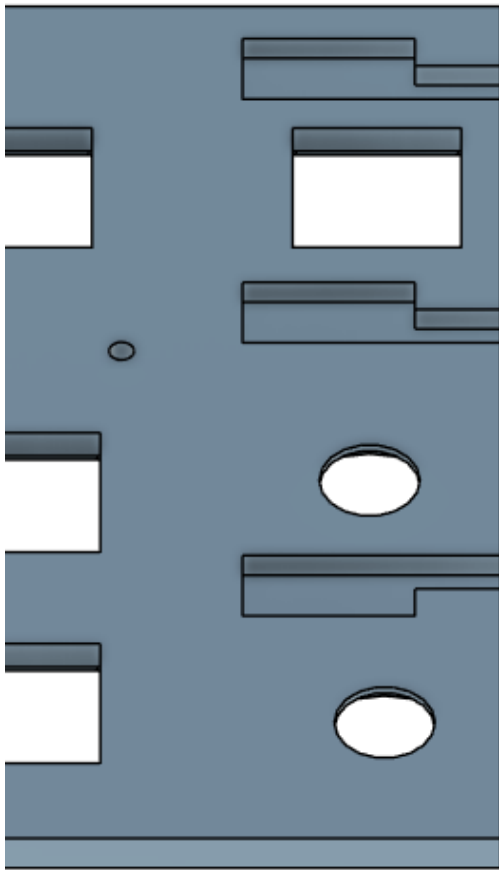

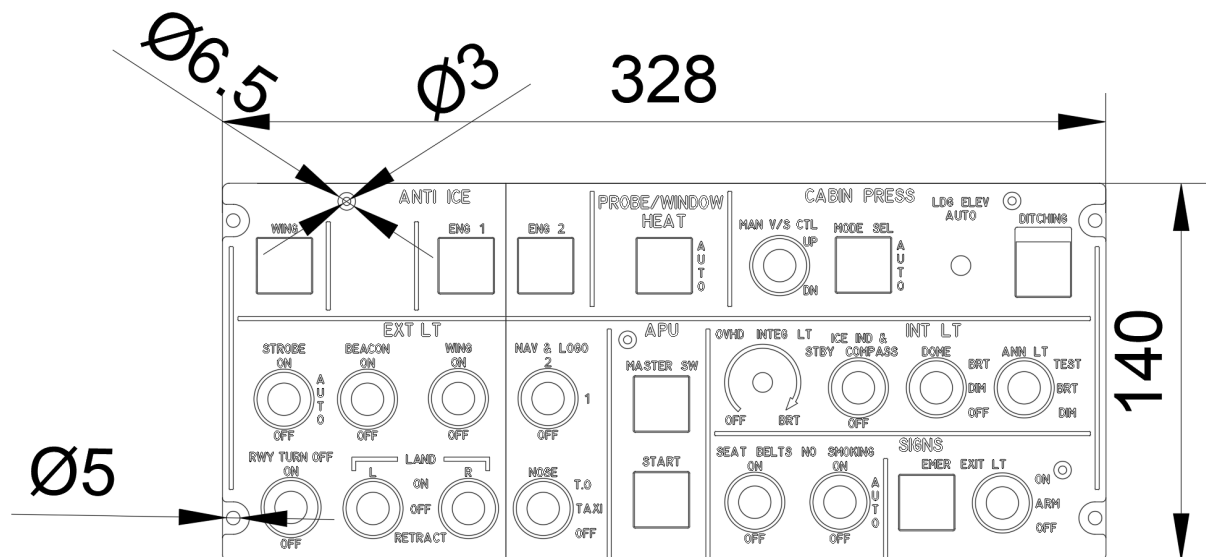

Features:

- Compatible with **Korry Switch v2**
- **3D-Printable Labels** – transparent & MMU-compatible

Description:

This is a **realistic, modular 3D-printable overhead panel** for the Airbus A320 ✈ Includes controls for **Anti-Ice, APU, Cabin Pressure, and Lighting**, perfect for home cockpit builders and sim enthusiasts.

Printing Settings

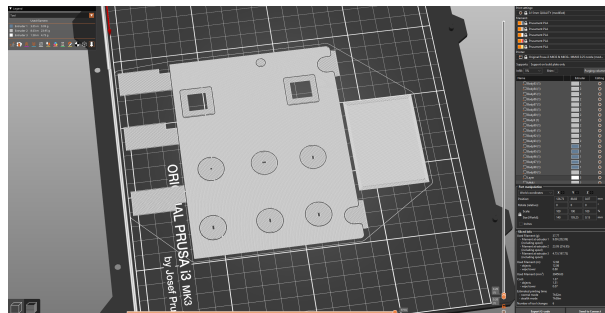

- **Perimeters:** 1 perimeter (thin walls look sharper)
- **Avoid crossing perimeters:** ON
- **Print outer perimeters first:** ON
- **Infill:** 5 %
- **Supports:** only on build plate (if you print upside down)

I print the text side down on the build plate for a cleaner surface texture. There is an extra solid layer by transparent filament under the text to prevent text from smudging due to bed heat.

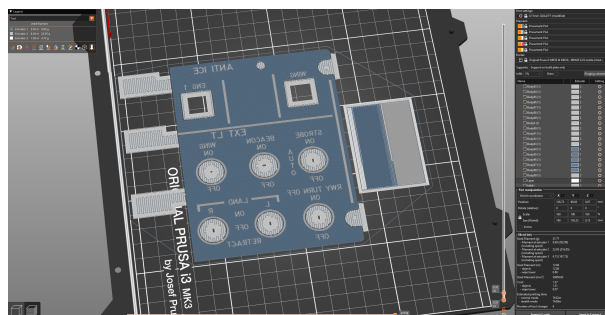

Filament color order (MMU):

- **Color 1:** main panel color
- **Color 2:** text color (natural color filament)
- **Color 3:** first helper layer (transparent filament)

First layer

Second layer

Difference between normal printing (text on top) and with a transparent first layer (text on the bottom)

- 0,25 mm nozzle

Normal printing (text up)

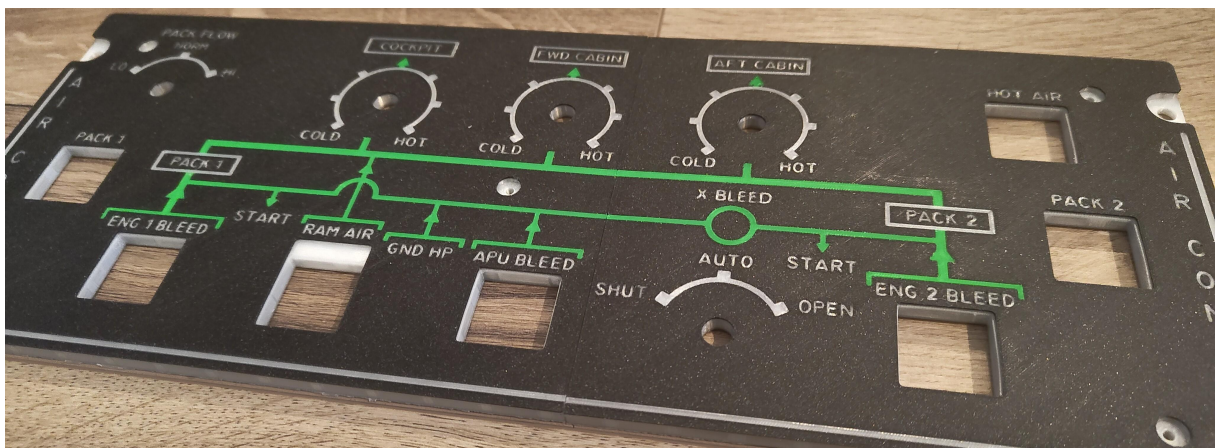

With transparent first layer
